

## Benefits of Industrial Water Recycling

Stone fabrication shops usually undertake various tasks that use a lot of water and also produce a lot of wastewater. Most companies use 15,000 to over 200,000 gallons of water every day to complete various tasks. With stringent regulations and requirements for running fabrication shops, it's important to ensure you are always compliant while reusing water whenever possible.

Installing wastewater treatment equipment not only keeps you in compliance but also provides a convenient operation in your workplace as well as significant savings. At M.W. Watermark™, we offer wastewater treatment equipment for fabrication shops that helps to reduce costs and eliminate fines.

Employing a filter press or slant plate clarifier in your projects reduces overall cost. With tighter regulations around contaminants and particulate matter, recycling gives you peace of mind knowing that associated compliance fines are one less thing to worry about.

## How to Recycle Wastewater in the Stone Fabrication Industry

To recycle your wastewater efficiently, you need to have a closed-loop collection system that collects the water you use in cutting, polishing, and other fabrication tasks. This central collection point allows you to remove the solids from the water and recycle the clean water back to much of your equipment.

## M.W. Watermark™ Equipment for Stone Fabrication Water Treatment

We are committed to offering quality products that simplify the whole recycling process to ensure maximum water reuse. Our main equipment offering includes filter presses for separating stone particles from wastewater. We also offer rebuilt filter presses for businesses that are interested in lowering their initial costs. We recommend our slant plate clarifiers in some instances when the solids loading is relatively high. This helps to diminish the solids loading to the filter press.

## Why Choose M.W. Watermark?

Many fabrication shops opt for our equipment simply because we strive to deliver products that exceed their expectations. Our company shares the goal of saving Earth's most valuable resource: water. For this reason, our team works diligently to offer businesses recycling systems that help them reuse their wastewater. Whatever your capacity, we strive to offer an option catered to your specific needs.
