Highly efficient solid/liquid separation for the following industries:

- Stone Fabrication
- Metal Finishing
- Mining & Energy
- Power
- Industrial Wastewater
- Municipal Wastewater
- Lime Softening
- Chemical Processing
- Ready Mixed Concrete
- Car & Truck Washes
- CBD Oil Extraction

M.W. Watermark's standard and customized filter presses incorporate designs developed through years of experience to provide superior reliability, durability, and ease of use.

In-house treatability laboratory. Two pilot models for rental or purchase.
What is a Filter Press?

A filter press is a batch operation, fixed volume piece of equipment ranging from .01-600 ft³ that separates liquids and solids using pressure filtration. A slurry is pumped into the filter press and dewatered under pressure. A filter press can be used for process, water and wastewater treatment in a variety of different industries and applications.

A filter press has four main components:

**Frame**: The steel frame acts as a clamping device for the filter plates. (A)

**Filter Plates**: A filter cake forms in the chambers between filter plates. (B)

**Manifold**: Our standard manifold consists of piping and valves which control the slurry inlet and connect the four corner filtrate discharge ports into a common discharge pipe. (C)

**Filter Cloth**: A cloth filter that is attached to both sides of a filter plate. Solids build up on cloth to form a filter cake, separating liquids from solids.

How does it work?

1. Slurry is pumped into the filter press. The solids are distributed evenly on the filter cloths during the feed (fill) cycle.

2. Solids begin to build on the filter cloth, trapping the ensuing particles and building a filter cake. The filter cake acts as a depth filter for solid/liquid separation. Filtrate exits the plates through the corner ports into the manifold.

3. When the correct valves in the manifold are open, the filtrate exits the press through the filtrate outlet. As the filter press feed pump builds pressure, the solids build within the chambers until they are completely full of filter cake.

4. Once the chambers are full, the fill cycle is complete and the filter press is ready to be emptied.

Press Sizing Formulas*

*Please obtain all possible slurry information as outlined below. If one or more criteria are not available, we can test a sample of the slurry, and/or use some standard data.

### Standard Slurries

## M.W. Watermark™ Filter Press Product Range

### Plate Dimensions
- **470 mm x 470 mm (18” x 18”)**
- **630 mm x 630 mm (24” x 24”)**
- **800 mm x 800 mm (32” x 32”)**
- **1000 mm x 1000 mm (39” x 39”)**

### Capacity Range
- 0.5 ft³ to 4 ft³
- 2 ft³ to 12 ft³
- 8 ft³ to 30 ft³
- 20 ft³ to 50 ft³

### Hydraulics
- Manual (Standard) or Air (Single Acting)
- Air (Standard) or Manual
- Air (Standard) or Electric
- Air (Standard) or Electric

### Std. Piping Connections
- 1-1/2” Feed x 1” Discharge
- 2” Feed x 1-1/2” Discharge
- 2” Feed x 1-1/2” Discharge
- 3” Feed x 3” Discharge

### Plate Shifting
- Manual
- Manual, Semi-Automatic, or Automatic
- Manual, Semi-Automatic, or Automatic
- Manual, Semi-Automatic, or Automatic

### Options Shown:
- Air-Operated Diaphragm Feed Pump (On Shelf)
- Filter Cake Hopper
- Expansion Piece
- Semi-Automatic Plate Shifter
- Self-Dumping Filter Cake Hopper
- Air Hydraulics
- Automatic Plate Shifter with Cloth Washer
- Full Automation Control System (FACS)
- Electric Hydraulics
- Light Curtains
- Automatic Drip Trays
- Automated Valves
Plate Dimensions  1200 mm x 1200 mm (48” x 48”)
Capacity Range  40 ft³ to 125 ft³
Hydraulics  Electric (Standard) or Air
Std. Piping Connections  3” Feed x 3” Discharge
Plate Shifting  Manual, Semi-Automatic, or Automatic

Options Shown:
- Semi-Automatic Plate Shifter
- Process Automation Control System (PACS)
- Non-Gasketed Filter Plates
- Enduroliner™ Coating

Std. Piping Connections  3” Feed x 3” Discharge

Plate Dimensions  1500 mm x 1500 mm (60” x 60”)
Capacity Range  100 ft³ to 275 ft³
Hydraulics  Electric (Standard) or Air
Std. Piping Connections  4” Feed x 3” Discharge
Plate Shifting  Manual, Semi-Automatic, or Automatic

Options Shown:
- Automatic Plate Shifter
- Full Automation Control System
- EnduroLiner™ Coating

Plate Dimensions  1500 mm x 2000 mm (60” x 79”)
Capacity Range  250 ft³ to 350 ft³
Hydraulics  Electric
Std. Piping Connections  6” Feed x 4” Discharge
Plate Shifting  Automatic

Options Shown:
- Automatic Drip Trays
- Double Air Blowdown, Even Fill Manifold

Plate Dimensions  2000 mm x 2000 mm (79” x 79”)
Capacity Range  300 ft³ to 600 ft³
Hydraulics  Electric
Std. Piping Connections  6” Feed x 4” Discharge
Plate Shifting  Automatic

Options Shown:
- Overhead Plate Suspension
- Full Automation Control System
- Automatic Plate Shifter with Cloth Washer

320mm Pilot Filter Press  630mm Filter Press  ...And Other Models
Trailer-Mounted Filter Presses
Press Closure
With 100 psi and 225 psi designs, M.W. Watermark™ offers hydraulic press closure systems to fit a variety of requirements. Hydraulics range from hand-operated hydraulic pumps to standard air-operated hydraulics, to high-capacity electrically-powered hydraulics for large or automated filter presses.

Plate Shifter
M.W. Watermark’s mechanical plate shifters move each plate along the sidebar, allowing rapid discharge of the dewatered cake. A stainless steel sidebar cap is provided to facilitate plate shifting and protect the sidebar. Plate shifter designs include semi-automatic and automatic types. Our standard semi-automatic plate shifter includes a visible pressure gauge as well as easy access to the regulator. The automatic designs are available in shuttle and continuous chain drives. An automatic plate shifter with a cloth washer is also available.

Safety
M.W. Watermark offers many different safety features to help protect press operators and bystanders:

- **Safety Light Curtains**: Stops the press functions when any object crosses between the infrared light bars
- **Auto Shut-off Safety Tripwire Cable**: Stops press functions with less than two pounds of pressure
- **Safety Splash Curtains**: Contains liquid that may, under certain conditions, squirt or splash from between the filter plates during the fill cycle or power washing of the filter plates and cloths
- **Safety Gates**: Protects surrounding areas at all times
- **2-Palm Safety Closure Switch**: Protects the operator during press closure

Controls
M.W. Watermark’s control options include the following models:

- **Automatic Feed Pump Control System (AFPCS)**
  Increases feed pressure as the press fills
- **Electric Hydraulic Control System (EHCS)**
  Controls the feed pump, electric-hydraulic closure, and automatic drip trays
- **Process Automation Control System (PACS)**
  Controls the feed pump and automatic manifold valves on air-operated presses
- **Full Automation Control System (FACS)**
  Automates the filter press and controls the feed pump
Other M.W. Watermark™ Products & Services

**Rebuilt Equipment**
Used equipment is rebuilt in our facility and quality checked prior to shipment. A six month warranty is available on rebuilt equipment. M.W. Watermark can also rebuild your current equipment.

**Other Rental Equipment**
In addition to filter presses, M.W. Watermark stocks other equipment available for rental including Slant-Plate Clarifiers and OCS pilot units.

**Parts and Retrofits for Your Existing Press**
M.W. Watermark offers parts and retrofits for many makes and models of filter presses including legacy brands. Plate shifters, hydraulic retrofits and custom filter cloths are available. Cloth and gasket installation services are also available.

**Field Service**
Factory-trained professionals are available to visit jobsites to assist with start-ups, training, installation supervision, mechanical repairs and troubleshooting, PLC programming, process review, engineering, and rebuilds.

**Troubleshooting**
Technical sales and service employees are available by phone to troubleshoot and answer service questions during regular business hours.

**Laboratory Testing**
M.W. Watermark maintains an in-house laboratory for determining the most effective equipment, equipment sizing, filtration media, and dewatering techniques for your specific application.

**About M.W. Watermark**
M.W. Watermark’s top priority is customer satisfaction. We treat our customers the way we want to be treated. We offer prompt, courteous service and truly enjoy helping our customers.

The M.W. Watermark team has decades of experience designing, building, and servicing water and wastewater treatment equipment. Our experience in the field has given us insight into ways in which to better solve your water problems and improve your equipment.

Our mission is to provide advanced solutions to our customers while setting the standard for quality and value. We strive to create and provide products and services to meet and exceed expectations in quality, reliability, delivery and cost.
Why M.W. Watermark™?

M.W. Watermark wants to make a difference. We are passionate about the world’s water. We are innovative, focused on customer service and always try to exceed expectations. We are an environmentally conscious company with people who are energized, encouraged and inspired to make a difference on our planet by helping to keep our shared, finite water supply clean and usable for generations to come.

We build amazing, custom water and wastewater treatment equipment.

Together, we can make a difference.

OUR MISSION

M.W. Watermark’s mission is to provide advanced solutions to our customers while setting the standard for quality and value. We strive to create and provide products and services to meet and exceed expectations in quality, reliability, delivery and cost.
